

Learn about this template

Logical data models can help you:

- Model entity types, attributes, relationships, and domains.
- Understand of and make decision based on you data.
- Establish a common language that can be understood by everyone to increase the integrity of your data.

To customize this template:

1. Click on a shape and type the information you would like to include.
2. Update/add lines to show relationships between entities.
3. Add and arrange shapes as needed.

Pro tip: Update relationship types by change the endpoints and line styles on the properties bar.
